11. Any other suggestions for quality in teaching - learning process enhancement -

- Teaching in physics should be more experimental.
- The use of ICT tools should be increased.
- Industry tie ups must be encouraged
- Classes was good
- More industry oriented curriculum
- Complete notes provide
- I am fully satisfied with the help and guidance provided by the college and teachers throughout the college journey.Only one suggestion I would like to give

that industrial tie ups with college should strengthen more properly so that the students are not only aware in the academic portion but can sustain it in practical lives as well and can be beneficial for our career growth also

- Syllabus based Monthly test should be organised by teachers to improve the score & skills of students.
- They have to make concept more clear especially in pure mathematics
- Give other knowledge, other than books and also about the career options.
- Give other knowledge , other than books and also about the career options
- Weekly test conduct
- was fully satisfied with the help and guidance provided by the staff and college from time to time regarding studies and extracurricular activities. The only point where I disagree is that college tie ups with industry must be strengthened so that students are aware about recent trends and happenings in day to day lives which also is helpful from the career perspective.
- Require more in depth discussion of subjects in the classroom.
- Industry and market exposure should be given.
- Sometimes we students feel so demotivated and hopeless at the same time due to many reasons, being a student I know that you guys have already provided the motivation thing but I would love to see it in some other ways also, overall it is such a nice and lovely place to be a part of.
- Practical approach should be increased
- Everything is perfect, nothing needs to be changed.
- Best teaching
- Use of Technology for holistic learning
- Job oriented diploma course
- Everything was good. Teachers are very helpful.
