Abstract

In 2017, US filed for 59624 patents, China for 48882 patents and Japan 48208 patents Indian is not standing anywhere among 10 too. So, it's a matter of much concern for India like big education infrastructure with hug researchers to stand up and analyze the situation. As we know the awareness plays a key role in advancement in all aspect of progress of any country, therefore, this paper has taken awareness about IPR. It is necessary to check out to the mindset of Indian intellectuals, whether they aware about IPR. If they would aware about IPR than only can proceed for IPRs in future for their research findings. As the universities are hub of intellectuals therefore, this study is an insight of scholars as intellectuals in Jaipur city. It is to find out whether they are aware about IPR. To answer the question, awareness survey has been conducted by taking questionnaire. Objective of study is to discuss in detail about the level of awareness of IPR and to explore the attitude regarding the IPR awareness among research scholar. The questionnaire was distributed to the research scholars. Total 100 questionnaires were distributed to the respondents and only 65 questionnaires were received out of which 5 were eliminated as they didn't furnish data so finally 60 were taken as sample. The conclusion of this study shows that large number of respondent are not aware of intellectual property rights. However some of research scholars have little knowledge of intellectual property rights. It was also seeing that the researcher have very few knowledge of patent and copyright in their research.

Keywords: Intellectual Property, Copyright, Patent, awareness about IPR,

Introduction

Kirit K Patel (2008) examined the impact of liberal IPR policies on agro-biodiversity in two local communities, one tribal and one non-tribal, in two tribal villages, Dhabudi and Sarjumi in Dahod district of Gujarat. He found that the claims of new IPR policies related to farmers' rights legislation to increase crop varietal choices, encourage farmer-breeders and promote on farm conservation are overstated. He came to the conclusion that agro-biodiversity is no longer an asset but is becoming a liability for farmers as their farms

become smaller and leveled, as inequality within the community increases, as principal farmers migrate to distant labor markets for longer than just the lean season, and as policies continue undermining the role of local seed systems and public sector institutions in the development and dissemination of new crop parietal diversity¹. Intellectual property protects applications of ideas and information that are of commercial value.²
